## Step 1 — Battery

- Shutdown the computer.
- Remove all external devices.
- Unplug the power, and any other cords, from the laptop.
- Turn the laptop upside down, with the front towards you.

## Step 2

- Slide the battery release latch to the left until the battery pops up.
  - Lift the front edge of the battery pack and swing it back to remove it.
- ☑ When reassembling, first align the back of the battery with the chassis, then press the front downwards until it latches.

## Step 3 — RAM Cover

- Loosen the two 5mm Phillips #1 screws that secure the memory module compartment cover to the computer.
  - ⓘ These screws are captured to the cover panel.
- Lift the front edge of the memory module compartment cover and swing it back to remove it.

## Step 4 — RAM

- Use your fingers, or plastic opening tools, to spread the metal retaining tabs on each side of the RAM outwards until the module pops up.
  - Pull the module out of the socket at the same angle it is now oriented.
  - Repeat these steps to remove the second memory module.
- ☒ When reassembling, align the offset notch on the RAM contacts with the tab on the socket and insert at a 30 degree angle.

To reassemble your device, follow these instructions in reverse order.
